We are honored to announce that **Professor Yoshiaki Omura (New York)** begins in **Belgrade** with the BDORT course, in English and Serbian (simultaneous translation), which will cover all countries in Southeast Europe and countries of European Union . The course is accredited as a **International Course 1st categories (145-A-1-1979/2014)**, accredited by the Health Council of Ministry of Health of Republic Serbia. 7 CME points for students and 14 CME points for lecturer. The course may be attended by: **Medical Doctors, Doctors of Dentistry and Pharmacists.**

SUMMARY OF THE CONTINUING EDUCATION PROGRAMME (120 hours)

Bi-Digital O-Ring Test (BDORT) is a quantum medicine method, based on the resonance of electromagnetic waves, a phenomenon that was discovered by Mihajlo Pupin. The idea of the phenomenon of resonance application for diagnostic purposes and its introduction into clinical medical practice belonged to the inventor of this method (www.bdort.org , www.bdort.net), See film: <http://www.bdort.org/BiDigitalORingTestPages/Hallmark.shtml> http://www.youtube.com/results?search_query=bdort&page=2) :

Prof. Dr. Yoshiaki Omura

(<http://www.bdort.org/BiDigitalORingTestPages/CV.shtml>) who got it in 1977, while working on his project at Pupin Institute of Physics in Columbia University in New York. He published his researches related to BDORD application in the highly indexed medical journal: Acupuncture & Electro-Therapeutics Research, The International Journal, starting from Bi-Digital O-Ring Test for imaging and Diagnosis of Internal Organs of a Patient No. 5,188,107.

Prof. Omura received many international awards for his scientific research, as **One of 500 scientists 21st century**, **One of 1000 scientists 20th century** and in 2008 he was elected an **Honorary member of the Academy of Medical Sciences of Serbian Medical Association**.

BDORT method can be done by medical doctors, dentists and pharmacists, after an appropriate theoretical and practical training, gaining the title of Cert.MD-ORT.

BDORT is a non-invasive diagnostic and therapeutic method. Medical examination is done by two doctors. A doctor-assistant serves as a "medical device", and using one hand hand, electrode or laser he passes over the patient's body, and makes an O-shape fingers clench with the other hand. Another physician measures muscle strength of the grip, trying to open the clenched fingers. During the examination, muscle strength changes, depending on the information received from the electromagnetic field of the patient. The mechanism is based on the change in muscle strength, which varies due to changes in activity of the enzyme N-acetyl- serotonin- transferase and concentrations of the neurotransmitter serotonin in the pineal gland. In diagnostics, the tiles with reference substances, samples of drugs and supplements are used. The method sensitivity and specificity reaches 90%. After examination of the information received are checked with standard laboratory and clinical tests. Due to a possible diagnosis of certain diseases before the onset of symptoms, many doctors see this as a preventive method for early diagnosis and prevention of many chronic diseases such as endocrine, neurological, gynecological, malignant, and other ones.

BDORT is a method that combines knowledge from the scientific and complementary branches of medicine. It is now the trend in the medical world, where the socalled integrative medicine is created, which should not only be a simple combination, but a new quality of diagnosis and treatment.

BDORT is applied in:

- early diagnosis of chronic diseases;
- discovering the cause of the disease;
- determination of the optimal individual dose of test drug interactions and treatment;
- detection of allergies and intolerances (inhalation, nutritional and contact allergens);
- detection and localization of pathological changes in the body, particularly infections, the type and activity (viruses, bacteria, etc.), which is difficult to diagnose with standard tests, especially in inaccessible parts of the body (central nervous system, etc.);
- Detection and localization of toxins in the body (Autism, Alzheimer, MS, malignancies, rheumatic diseases, endocrine disorders, infertility and sterility ...);
- Detection of toxins in the environment of the patient (flat, food, clothes, makeup, hair dyes, toys .);

- Detection and assessment of impact of various species on health , especially non ionizing radiation in a radiation environment in the home, workplace ... (radiation from cell phones, computers, various electronic devices, radiation from base stations and other radio wave transmitters, power stations, geo-pathogenic radiation, detection of the presence of static electricity, etc.);
- Correct localization and detection of acupuncture points and acupuncture channels;
- Detection of reflex zones of organs through which it is possible to determine a diagnosis and treatment, etc.

ŠKOLA : OMURIN BI-DIGITAL O-RING TEST (BDORT)

I Block 16-19 October 2014.

II Block 31 October-02 November 2014.

Venue: Hotel LifeDesign Belgrade

Akreditovan

Internacionnalni kurs I kategorije (145-A-1-1979/2014),

Bi-Digital O-Ring Test (BDORT) je metoda kvantne medicine, zasnovana na rezonanciji elektromagnetnih talasa, fenomenu koji je otkrio Mihajlo Pupin. Ideju da fenomen rezonancije primeni u dijagnostičke svrhe i uvede u medicinsku kliničku praksu, dobio je pronalazač ove metode: **Prof. Dr. Yoshiaki Omura**, 1977. godine, radeći projekat, na Pupinovom Institutu za fiziku na Kolumbijskom Univerzitetu u Njujorku. Svoja istraživanja vezana za primenu BDORT-a objavio je u visoko indeksiranom medicinskom časopisu: Acupuncture & Electro-Therapeutics Research, The International Journal, počevši od 1981. godine. 1993. god. dobija Američki patent za pronalazak:

Bi-Digital O-Ring Test for Imaging and Diagnosis of Internal Organs of a Patient, Patent No. 5,188,107.

Prof. Omura je dobio mnoga svetska priznanja za svoj naučno-istraživački rad, a 2008. biva izabran za Počasnog člana Akademije Medicinskih Nauka SLD-a.

BDORT-om mogu da se bave Doktori medicine i stomatologije i Farmaceuti, posle adekvatne teoretske i praktične edukacije, dobijajući titulu Cert-MD ORT.

BDORT je neinvazivna dijagnostičko-terapeutska metoda. Pregled rade dva lekara. Jedan lekar-asistent služi kao „medicinski aparat“ i on jednom rukom, elektrodom ili laserom, prelazi preko tela pacijenta, a na drugoj ruci pravi stisak prstiju u obliku slova-O. Drugi lekar meri mišićnu snagu tog stiska, pokušavajući da otvoriti stisnute prste. Tokom pregleda menja se mišićna snaga u zavisnosti od informacija koje se dobijaju iz elektromagnetskog polja pacijenta. Mehanizam se zasniva na promeni mišićne snage, koja se menja zbog promene aktivnosti enzima N-Acetyl Serotonin-Transferaze i koncentracije neurotransmitera serotoninina u pinealnoj žlezdi.

U dijagnostici se koriste pločice sa referentnim supstancama, uzorci lekova i suplemenata. Senzitivnost i specifičnost metode dostiže 90%. Posle izvršenog pregleda dobijene informacije se proveravaju standardnim laboratorijskim i kliničkim testovima. Zbog mogućnosti dijagnostike nekih oboljenja pre pojave simptoma, mnogi ovu metodu vide kao preventivnu, za ranu dijagnostiku i prevenciju nastanka mnogih hroničnih oboljenja kao što su: endokrina, neurološka, ginekološka, maligna i druga.

BDORT je metoda koja objedinjuje znanja iz Naučne i Komplementarnih grana medicine. To je danas trend medicine u svetu, gde se radi na stvaranju tzv. Integrativne medicine, koja ne bi trebala da bude samo prosti spoj, već novi kvalitet u dijagnozi i lečenju.

U toku seminara biće prikazana iskustva lečenja BDORT-om u raznim oblastima medicine, kao što su: Onkologija, Endokrinologija, Neurologija, Pedijatrija, Dermato-venerologija, Ginekologija, Fizikalana Medicina, Reumatologija iz Japana, Sjedinjenih Američkih Država, Turske, Brazila, Srbije, Slovenije, Bosne i Hercegovine
